Backend Developer | PHP & Laravel

Professional Summary

Backend developer focused on **PHP and Laravel**, with paid freelance e-commerce experience. Builds reliable checkout flows, **REST APIs**, and access rules, with automated tests and measured performance improvements.

Freelance Experience

MASR Security E-commerce Platform

Freelance Laravel Developer | June 2026 - Present | Paid, part-time | View project

- Independently built an Arabic/English e-commerce site from manager requirements, including checkout, catalog tools, and bulk pricing. Integrated **Paymob**; verified payments in sandbox only.
- Improved mobile LCP (main-content load time): homepage **3.161** to **1.813** s (~**43%** faster); shop **2.262** to **1.658** s (~**27%**). Lighthouse scores: home **92** to **99**; shop **98** to **100**.
- Cut uncompressed CSS ~**52%** (~**120** to ~**58 KB**); generated **787** WebP versions from **191** preserved originals. All **15** JavaScript logic tests passed on **20** October **2026**.
- Reconciled **205** spreadsheet rows; removed **107** unused products and kept **6** referenced components. Query benchmark: homepage **11** to **8**; warm dashboard **5** to **0**.

Mobile lab medians: 5 Oct 2026. Query benchmark: earlier/undated, five isolated PHPUnit/SQLite samples per setup. Catalog: 4 Oct 2026.

Selected Projects

MVP Bank

Personal project - simulated banking | View demo (sign-in protected)

- Built **17** documented API operations with exact-money handling, access rules, atomic balance/history updates, ordered account locks, and safe retries.
- Historical verification: **154** backend tests and **615** assertions on MySQL/PostgreSQL; **7** concurrency/locking scenarios. All **49** frontend logic tests passed on **20** October **2026**.

Backend verification: 17 Oct 2026; locking audit: 28 Sep 2026. Historical counts; a simulated bank with no real deposits.

Order App

Personal project - food-ordering API | View project source

- Implemented **3** roles and **5** controlled order states, record ownership checks, restaurant-owner applications, and scoped delivery tracking.

Technical Skills

Programming & Backend: PHP, Laravel, SQL, JavaScript, HTML/CSS, Blade, REST APIs, Sanctum

Databases & Reliability: MySQL, PostgreSQL, Eloquent, transactions, row locking, access policies

Testing & Tools: PHPUnit, Pest, Git/GitHub, Postman, OpenAPI, Paymob, signed webhooks

Education

B.Sc. in Artificial Intelligence | Kafrelsheikh University | 2023
